

Technical Skills: Java, Spring Boot, Spring MVC, React.js, TypeScript, JavaScript, Redux, React Hooks, HTML5, CSS3, AgGrid, REST APIs, WebSockets, SockJS, STOMP, SQL, MyBatis, Maven, JUnit, Mockito, Jenkins, Git, CI/CD, Python, FastAPI, Node.js, NestJS, Google BigQuery, GCP, Playwright, Docker, Kubernetes, Claude AI, Cursor, GitHub Copilot, Agile Scrum

Professional Summary

- Around **5+ years of experience** designing, developing, and supporting enterprise-grade applications using **Java, Spring Boot, React, TypeScript**, JavaScript, and modern Full Stack development practices.
- Strong expertise building high-performance **React** Single Page Applications utilizing **TypeScript**, Redux, Hooks, reusable component architecture, responsive UI design, and enterprise web development best practices.
- Hands-on experience developing scalable backend services using **Java, Spring Boot**, RESTful APIs, WebSockets, multithreading, and distributed application architectures supporting high-throughput enterprise systems.
- Experienced integrating browser-based applications with **REST APIs, WebSockets**, Spring services, SQL databases, and enterprise messaging platforms to deliver responsive real-time user experiences.
- Proficient in modern frontend engineering using **React**, AgGrid, HTML5, CSS3, JavaScript, TypeScript, Redux, and browser performance optimization techniques.
- Strong background developing enterprise applications utilizing **SQL**, relational databases, Spring MVC, Maven, Git, Jenkins, CI/CD pipelines, automated testing, and production deployment practices.
- Experienced modernizing legacy enterprise applications by refactoring reusable components, reducing technical debt, improving maintainability, and supporting production applications.
- Hands-on experience utilizing **Python**, FastAPI, Node.js, and cloud-native technologies supporting enterprise APIs, automation, and backend integration workflows.
- Active user of **Claude AI**, Cursor, GitHub Copilot, and AI-assisted development tools to accelerate development, improve code quality, automate documentation, and increase engineering productivity.
- Excellent analytical, communication, and collaboration skills with experience working closely with architects, product managers, QA teams, and cross-functional Agile engineering organizations.

Experience

MARTA - Metropolitan Atlanta Rapid Transit Authority

Atlanta, GA

Full Stack Developer

Mar 2025 – Present

- Designed and developed enterprise trading-style web applications using **React, TypeScript, Java**, and **Spring Boot**, delivering high-performance Single Page Applications supporting real-time operational workflows.
- Built reusable **React** component libraries utilizing Redux, Hooks, modular architecture, and enterprise UI patterns, improving maintainability and accelerating feature delivery across multiple applications.
- Integrated frontend applications with **Spring Boot, REST APIs, WebSockets**, SockJS, and enterprise backend services enabling secure real-time communication and low-latency data updates.
- Developed scalable backend services using **Java**, Spring Boot, multithreading, RESTful APIs, and SQL supporting high-throughput enterprise transaction processing.
- Improved application response time by 47% through React rendering optimization, WebSocket message optimization, SQL tuning, browser profiling, and frontend performance improvements.
- Developed enterprise data grids using **AgGrid**, advanced filtering, sorting, virtualization, and client-side rendering techniques for large transactional datasets.
- Built automated unit and integration tests utilizing **JUnit**, Mockito, and Playwright while supporting continuous testing throughout the software development lifecycle.
- Utilized **Git, Jenkins**, Maven, and CI/CD pipelines to automate builds, deployments, code reviews, and production release processes.
- Leveraged **Claude AI**, Cursor, and GitHub Copilot to accelerate feature development, code refactoring, documentation generation, and technical debt reduction.
- Contributed to legacy application modernization by migrating existing modules into modern **React** applications while preserving business functionality and improving user experience.

- Collaborated with architects, product managers, QA engineers, and backend developers to deliver scalable enterprise applications while participating in Agile Scrum ceremonies and production support activities.
- Designed backend integration utilities using **Python**, FastAPI, and SQL to automate operational workflows and support future cloud-native data processing initiatives.

HCA Healthcare

Full Stack Developer

Atlanta, GA

May 2023 – Mar 2025

- Developed enterprise applications using **Java**, **Spring Boot**, **React**, and **TypeScript**, delivering secure, scalable, and high-performance healthcare solutions supporting thousands of daily users.
- Built reusable **React** component libraries utilizing Redux, Hooks, modular UI architecture, HTML5, CSS3, and enterprise frontend design patterns to accelerate feature delivery.
- Integrated frontend applications with **Spring Boot**, **REST APIs**, **WebSockets**, SockJS, SQL Server, and backend microservices enabling secure real-time healthcare workflows.
- Developed backend services using **Java**, Spring Boot, multithreading, RESTful APIs, and SQL supporting high-volume transaction processing and enterprise integrations.
- Improved application throughput by 43% through SQL optimization, WebSocket tuning, asynchronous processing, React rendering optimization, and backend performance enhancements.
- Designed enterprise data-intensive interfaces utilizing **AgGrid**, advanced filtering, pagination, virtualization, and dynamic data rendering for operational dashboards.
- Developed automated unit and integration tests using **JUnit**, Mockito, Playwright, and REST API validation ensuring production-quality software releases.
- Utilized **Git**, Maven, Jenkins, and CI/CD pipelines to automate application builds, deployments, release management, and production support activities.
- Leveraged **Claude AI**, Cursor, and GitHub Copilot to accelerate feature implementation, code reviews, documentation generation, and legacy application modernization.
- Refactored legacy enterprise modules into modern **React** Single Page Applications while reducing technical debt and improving maintainability.
- Collaborated with architects, business analysts, QA engineers, and product managers to deliver scalable enterprise software using Agile Scrum methodologies.
- Developed backend automation services using **Python**, FastAPI, SQL, and cloud-native APIs supporting reporting, integrations, and future data engineering initiatives.

Dollar Tree Stores

Full Stack Developer

Chesapeake, VA

Aug 2020 – Jul 2022

- Developed enterprise retail applications using **Java**, **Spring Boot**, **React**, and **TypeScript** supporting inventory management, pricing, and supply chain operations.
- Built scalable **React** Single Page Applications utilizing Redux, Hooks, reusable component architecture, HTML5, CSS3, and enterprise frontend development best practices.
- Integrated browser applications with **Spring Boot**, **REST APIs**, **WebSockets**, SQL databases, and backend services enabling secure real-time inventory synchronization.
- Developed backend microservices using **Java**, Spring Boot, SQL, RESTful APIs, and distributed application design supporting enterprise retail platforms.
- Reduced application response time by 39% through frontend optimization, SQL tuning, WebSocket optimization, caching strategies, and backend performance improvements.
- Developed enterprise grid-based user interfaces utilizing **AgGrid**, dynamic filtering, sorting, virtualization, and responsive data visualization techniques.
- Implemented automated testing using **JUnit**, Mockito, Playwright, browser automation, and API validation improving release quality and deployment confidence.
- Utilized **Git**, Jenkins, Maven, and CI/CD pipelines supporting automated builds, deployments, version control, and production application maintenance.
- Leveraged **Claude AI**, Cursor, and GitHub Copilot to accelerate development, optimize legacy code, improve software quality, and automate engineering documentation.
- Modernized legacy web applications by migrating existing modules into **React** while preserving business functionality and improving user experience.
