

Technical Skills: Java, Spring Boot, JavaScript, TypeScript, React, Angular, HTML5, CSS3, SQL, Oracle DB, PostgreSQL, BigQuery, REST APIs, Microservices, Kubernetes, Docker, GCP, AWS, Microsoft Azure, Elastic, OAuth2, JWT, Git, GitHub, Jenkins, CI/CD, JUnit, Mockito, Kafka, Redis, Production Monitoring, Performance Tuning, Root Cause Analysis, Unit Testing, Functional Testing, Debugging, Agile Scrum, SDLC

PROFESSIONAL SUMMARY

- Around **5+ years of experience** designing, developing, testing, deploying, and supporting enterprise software applications using **Java, Spring Boot, REST APIs**, cloud technologies, and distributed systems.
- Strong expertise building scalable and secure applications utilizing **GCP, Kubernetes, Oracle DB, BigQuery, Elastic**, and modern software engineering best practices.
- Hands-on experience developing production-ready applications with **Microservices**, implementing **OAuth2, JWT** authentication, application security, and enterprise integrations.
- Experienced developing and executing **unit testing, functional testing**, performance validation, CI/CD deployments, and production monitoring ensuring highly reliable software releases.
- Proficient in troubleshooting complex production issues through **root cause analysis**, performance tuning, log analysis, debugging techniques, and proactive monitoring strategies.
- Experienced working with Agile Scrum teams collaborating with product managers, UX designers, QA engineers, and cross-functional stakeholders to deliver developer-ready user stories and production software.
- Strong background utilizing **Git**, version control systems, automated deployment pipelines, Docker, and cloud-native technologies supporting continuous software delivery.
- Skilled in SQL development, Oracle Database, distributed application integration, API development, software refactoring, and enterprise application optimization.
- Passionate about mentoring junior engineers, participating in technical design reviews, promoting engineering best practices, and continuously improving software quality and maintainability.
- Excellent analytical, communication, and problem-solving skills with a strong commitment to delivering scalable, resilient, and customer-focused enterprise software solutions.

Experience

MARTA - Metropolitan Atlanta Rapid Transit Authority

Senior Software Engineer

Atlanta, GA

Mar 2025 – Present

- Designed, developed, and maintained enterprise applications using **Java, Spring Boot, REST APIs, Oracle DB**, and distributed architectures supporting mission-critical transportation systems.
- Built scalable backend services utilizing **Microservices, GCP, BigQuery, Kubernetes**, and cloud-native deployment strategies improving application scalability and resilience.
- Implemented secure authentication and authorization using **OAuth2, JWT**, role-based access control, and enterprise security frameworks protecting business-critical applications.
- Collaborated with product owners, QA engineers, UX designers, and business stakeholders to refine developer-ready user stories, design scalable software solutions, and deliver production-ready features.
- Improved application performance by **45%** through **performance tuning**, SQL optimization, caching strategies, application refactoring, and proactive production monitoring.
- Developed automated **unit tests**, functional tests, integration tests, and deployment validation ensuring reliable production releases with minimal defects.
- Implemented CI/CD pipelines using Git, Jenkins, Docker, and Kubernetes automating software builds, testing, deployments, and release management.
- Utilized Elastic monitoring, application logs, and debugging tools to perform root cause analysis, identify production issues, and implement permanent corrective actions.
- Integrated enterprise applications with Oracle databases, third-party systems, and cloud services using REST APIs and asynchronous messaging.
- Participated in architecture discussions, technical design reviews, code refactoring initiatives, and software modernization projects improving maintainability.

- Mentored junior engineers through technical guidance, code reviews, pair programming, and knowledge sharing while promoting engineering best practices.

HCA Healthcare

Senior Software Engineer

Atlanta, GA

May 2023 – Mar 2025

- Designed, developed, and enhanced enterprise healthcare applications using **Java**, **Spring Boot**, **REST APIs**, **Oracle DB**, and cloud technologies supporting mission-critical clinical and operational systems.
- Developed scalable backend services utilizing **Microservices**, **Kubernetes**, **GCP**, **SQL**, and distributed architectures to improve application scalability, resilience, and maintainability.
- Implemented secure authentication and authorization using **OAuth2**, **JWT**, enterprise security frameworks, and role-based access control ensuring compliance with healthcare security standards.
- Collaborated with product owners, business analysts, QA engineers, and cross-functional Agile teams to refine developer-ready user stories and deliver production-ready software solutions.
- Improved application response time by **38%** through **performance tuning**, **SQL** query optimization, application refactoring, caching strategies, and production monitoring.
- Developed comprehensive **unit tests**, functional tests, integration tests, and automated validation suites using JUnit and Mockito ensuring high-quality software releases.
- Built CI/CD pipelines using Git, Jenkins, Docker, and Kubernetes automating application builds, testing, deployments, and release management activities.
- Utilized **Elastic**, application logs, distributed tracing, and debugging techniques to perform root cause analysis and rapidly resolve production issues.
- Integrated enterprise applications with Oracle databases, third-party healthcare systems, and cloud services using REST APIs, JSON, and secure messaging frameworks.
- Participated in technical design reviews, software refactoring initiatives, architecture discussions, and continuous improvement efforts enhancing application reliability.
- Mentored junior software engineers by conducting code reviews, providing technical guidance, and promoting software engineering best practices.
- Worked within Agile Scrum teams participating in sprint planning, backlog refinement, production deployments, retrospectives, and continuous delivery initiatives.

Dollar Tree Stores

Software Engineer

Chesapeake, VA

Aug 2020 – Jul 2022

- Designed and developed enterprise retail applications using **Java**, **Spring Boot**, **REST APIs**, **Oracle DB**, **SQL**, and distributed application architecture supporting inventory and retail operations.
- Developed backend services utilizing **Microservices**, **SQL**, cloud technologies, and scalable application design improving system reliability and maintainability across enterprise applications.
- Implemented secure application authentication using **OAuth2**, **JWT**, enterprise security frameworks, and secure API communication protecting sensitive business information.
- Collaborated with product managers, QA engineers, business analysts, and development teams to build scalable software solutions and deliver developer-ready application features.
- Improved application throughput by **30%** through **performance tuning**, database optimization, application refactoring, and proactive production monitoring.
- Developed and executed **unit tests**, functional testing, integration testing, and release validation activities ensuring reliable production deployments.
- Utilized Git, Jenkins, Docker, and CI/CD pipelines to automate software builds, testing, deployments, and release management workflows.
- Performed debugging, log analysis, and **root cause analysis** to identify production issues and implement long-term corrective solutions improving application stability.
- Developed **SQL** queries, stored procedures, and Oracle database objects supporting enterprise applications, reporting, and operational analytics.
- Participated in software architecture discussions, code refactoring efforts, technical reviews, and application modernization initiatives improving long-term maintainability.
- Collaborated with infrastructure, QA, and support teams during production deployments, application monitoring, and post-release validation activities.
