

Technical Skills: React.js, TypeScript, JavaScript, Node.js, NestJS, Python, FastAPI, HTML5, CSS3, React Hooks, Redux, REST APIs, WebSockets, Google BigQuery, Google Cloud Platform (GCP), SQL, Mapbox GL JS, GeoJSON, PostGIS, IndexedDB, Web Workers, Playwright, Docker, Kubernetes, Git, GitHub, Jenkins, CI/CD, Java, Spring Boot, Claude AI, Cursor, GitHub Copilot, Agile Scrum

Professional Summary

- Around **5+ years of experience** developing enterprise web applications using **React, TypeScript, Node.js, Python**, and modern Full Stack technologies with expertise in large-scale data visualization and cloud-native application development.
- Strong expertise building scalable **React** Single Page Applications utilizing **TypeScript**, reusable component architecture, responsive UI design, data visualization, and modern frontend engineering best practices.
- Hands-on experience developing backend services using **FastAPI, NestJS**, Python, Node.js, REST APIs, and cloud-native architectures supporting high-volume enterprise data platforms.
- Experienced integrating enterprise applications with **Google BigQuery, Google Cloud Platform**, SQL databases, REST APIs, and distributed backend services supporting analytical workloads.
- Proficient designing high-performance client-side applications utilizing **React**, HTML5, CSS3, JavaScript, WebSockets, browser optimization techniques, and scalable rendering strategies for large datasets.
- Strong background implementing enterprise data visualization solutions utilizing **Mapbox GL JS**, GeoJSON, PostGIS, virtualization, client-side caching, and modern JavaScript libraries.
- Experienced optimizing browser performance through vector tiles, IndexedDB caching, React profiling, lazy loading, Web Workers, and efficient rendering of large geospatial and tabular datasets.
- Hands-on experience utilizing **Java**, Spring Boot, SQL, CI/CD pipelines, and enterprise integration services supporting scalable backend APIs and production applications.
- Active user of **Claude AI**, Cursor, GitHub Copilot, and AI-assisted development tools to accelerate software delivery, improve code quality, automate testing, and increase engineering productivity.
- Excellent communication, analytical, and collaboration skills with experience partnering with product managers, architects, business analysts, and cross-functional Agile engineering teams.

Experience

MARTA - Metropolitan Atlanta Rapid Transit Authority

Atlanta, GA

Full Stack Developer

Mar 2025 – Present

- Designed and developed enterprise data applications using **React, TypeScript, Node.js, FastAPI**, and Python delivering scalable web platforms for operational analytics and large datasets.
- Built reusable **React** component libraries utilizing Hooks, Redux, modular architecture, responsive layouts, and enterprise UI patterns supporting interactive data exploration.
- Developed backend APIs using **FastAPI, NestJS**, REST APIs, Python, and Node.js supporting high-volume analytical applications and cloud-native services.
- Integrated enterprise applications with **Google BigQuery, Google Cloud Platform**, SQL databases, and backend microservices enabling large-scale analytical reporting and visualization.
- Improved client-side rendering performance by 49% through React optimization, virtualization, lazy loading, caching strategies, efficient state management, and browser profiling.
- Built interactive visualization components utilizing **Mapbox GL JS**, GeoJSON, PostGIS, vector tiles, and dynamic rendering techniques supporting large geospatial datasets.
- Implemented scalable client-side rendering using **IndexedDB**, Web Workers, virtualization, and efficient data reduction techniques for high-volume browser applications.
- Developed automated testing using **Playwright**, REST API validation, browser testing, integration testing, and CI/CD pipelines ensuring production-ready software quality.
- Leveraged **Claude AI**, Cursor, and GitHub Copilot to accelerate feature development, optimize code quality, automate documentation, and improve engineering productivity.

- Developed enterprise backend services using **Java**, Spring Boot, SQL, and WebSockets supporting real-time integrations and distributed application architectures.

HCA Healthcare

Atlanta, GA

Full Stack Developer

May 2023 – Mar 2025

- Developed enterprise analytical applications using **React**, **TypeScript**, **Node.js**, **FastAPI**, and Python delivering scalable data-driven healthcare solutions and interactive dashboards.
- Built reusable **React** component libraries utilizing Hooks, Redux, modular architecture, responsive layouts, and enterprise UI patterns supporting rich analytical user experiences.
- Developed backend APIs using **FastAPI**, **NestJS**, REST APIs, Python, and Node.js supporting high-volume data processing and cloud-native analytical services.
- Integrated enterprise applications with **Google BigQuery**, **Google Cloud Platform**, SQL Server, and distributed backend services supporting large-scale reporting and analytical workloads.
- Improved client-side application performance by 46% through React optimization, virtualization, browser profiling, lazy loading, caching strategies, and efficient rendering techniques.
- Developed interactive visualization modules utilizing **Mapbox GL JS**, GeoJSON, PostGIS, vector tiles, and dynamic rendering supporting large geospatial healthcare datasets.
- Implemented browser-side optimization using **IndexedDB**, Web Workers, client-side caching, virtualization, and efficient rendering strategies for large datasets.
- Built automated testing suites utilizing **Playwright**, browser automation, REST API validation, integration testing, and CI/CD pipelines ensuring production-ready software.
- Leveraged **Claude AI**, Cursor, and GitHub Copilot to accelerate development, automate testing, improve code quality, and streamline engineering workflows.
- Developed enterprise backend services using **Java**, Spring Boot, SQL, and WebSockets supporting secure integrations and distributed application architectures.
- Collaborated with architects, UX designers, product managers, QA engineers, and business stakeholders to deliver scalable enterprise analytical platforms using Agile Scrum methodologies.
- Optimized cloud-native applications through reusable component development, performance tuning, scalable frontend architecture, and continuous engineering improvements.

Dollar Tree Stores

Chesapeake, VA

Full Stack Developer

Aug 2020 – Jul 2022

- Developed enterprise web applications using **React**, **TypeScript**, **Node.js**, **FastAPI**, and Python supporting large-scale retail analytics and operational reporting platforms.
- Built reusable **React** component libraries utilizing Hooks, Redux, responsive layouts, modular architecture, and enterprise UI development best practices.
- Developed scalable backend APIs using **FastAPI**, **NestJS**, REST APIs, Python, and Node.js supporting enterprise reporting, analytical processing, and cloud-native services.
- Integrated enterprise applications with **Google BigQuery**, **Google Cloud Platform**, SQL databases, and backend microservices supporting large-scale retail analytics.
- Improved browser rendering performance by 42% through React profiling, virtualization, browser caching, lazy loading, efficient state management, and optimized client-side rendering.
- Built enterprise visualization components utilizing **Mapbox GL JS**, GeoJSON, PostGIS, vector tiles, and scalable rendering strategies supporting location-aware retail analytics.
- Implemented browser optimization using **IndexedDB**, Web Workers, virtualization, caching techniques, and efficient processing of high-volume tabular datasets.
- Developed automated end-to-end testing using **Playwright**, browser testing, API validation, regression testing, and CI/CD pipelines improving software quality.
- Leveraged **Claude AI**, Cursor, and GitHub Copilot to improve developer productivity, automate repetitive tasks, optimize code quality, and accelerate feature delivery.
- Built enterprise backend services using **Java**, Spring Boot, SQL, and WebSockets supporting distributed business applications and real-time integrations.
- Worked closely with architects, product managers, business analysts, UX designers, and engineering teams to deliver scalable enterprise data platforms using Agile Scrum.
